SUMMARY

Analytically driven early-career data scientist with industry and research experience in machine learning, statistical modelling and software engineering. Skilled in transforming complex data into actionable insights, with a strong foundation in both theoretical and applied aspects of data science. Currently pursuing an MSc in Data Science to further strengthen expertise in applied ML and statistical analysis.

EDUCATION

Lancaster University

MSc in Data Science

Lancaster, UK

Expected Graduation: Dec 2026

University of Moratuwa

BSc (Hons) in Information Technology

Colombo, Sri Lanka

Graduated in July 2023

(Key modules: Final Year Research (A), Neural Networks (A), Reinforcement Learning (A-), ML (B+), Advanced Math. (A-), Com. Statistics (A), OOP (A-))

SKILLS

Technical Skills: Python, PySpark, PyTorch, Pandas, NumPy, Statsmodels, Scikit-learn, Gradient Boosting Methods, Diffusion models, SQL (Oracle & MSSQL), TensorFlow, FastAPI, Databricks, Java (Spring Boot), C# (ASP.NET), C++, Git, GitLab, Foundational models, AI agents

Soft Skills: Analytical & Problem Solving, Stakeholder Collaboration, Teamwork, Self-learner, Work Under Pressure, Strong Communication Skills, Entrepreneurial Mindset, Cross-functional Coordination, Technical Support & Client Engagement

PROFESSIONAL EXPERIENCE

Generative AI Technologist (GANs & Machine Learning)

Nov 2025 – Present

Lancaster University

Lancaster, UK

Partnered with the School of Art to engineer generative AI solutions, translating artistic concepts into deep learning models. Deployed complex training jobs on the university's High End Computing (HEC) cluster, optimizing code for multi-GPU environments. Led end-to-end development, from curating custom datasets to exploring latent space, while ensuring rigorous documentation for reproducibility. Core stack includes PyTorch, StyleGAN, Diffusion, Computer Vision, and HEC workflows.

Software Engineer

Nov 2023 – Sep 2025

IFS R&D International

Colombo, Sri Lanka

Worked at the Unified Support - Engineering, Construction and Infrastructure (ECI) team, where I was responsible for debugging, upgrading, and performing data repairs on customer-facing software products. I actively participated in customer meetings to address urgent issues, ensuring timely solutions and exceptional service delivery. My work mainly involved technologies such as PL/SQL, IFS Cloud, IFS Apps 10, Git, BitBucket, and Azure.

Data Science Intern

Dec 2022 – May 2023

OCTAVE - John Keells Group

Colombo, Sri Lanka

Contributed to the development and maintenance of a sales prediction-based human resource allocation model for Keells Super outlets, and took part in building a web application to manage data engineering pipelines. Also had exposure to working in an Agile Scrum environment while improving collaboration and problem-solving skills. The project involved Python, PySpark, Databricks, Flask, React, Git, and Azure DevOps.

Intern (Software Engineering)

Jan 2022 – Jul 2022

Calcey Technologies

Colombo, Sri Lanka

Worked on AiSCOUT, an industry-level project, gaining valuable experience with Agile Scrum methodology and software engineering practices. The role helped me sharpen my technical and professional skills while contributing to the development and maintenance of software solutions using C#, ASP.NET, MSSQL, Git, and Visual Studio.

PROJECTS & PUBLICATIONS

Statistical Analysis of Benchmark Data

Oct 2025 – Dec 2025

Industry Project – Advanced Micro Devices (AMD), UK

Python, Streamlit, Pandas, NumPy, Statsmodels, Scikit-learn

Developed an automated framework for high-variance API benchmarking. Created an adaptive regime detection algorithm to filter warmup data and implemented a weighted consensus voting system of 7 non-parametric statistical tests (e.g., Brunner-Munzel) to determine statistical superiority. Utilized the Hodges-Lehmann estimator to quantify performance gains, neutralizing outliers and unequal variances.

Score Prediction in T20 Cricket

2023

Final Year Research Project

Python, TensorFlow, Keras, FastAPI, React

Developed a predictive framework to forecast first-innings cricket scores using machine learning techniques. Conducted data preprocessing, model training, and visualization using TensorFlow, Pandas, NumPy, Matplotlib, Seaborn.

Publication: D. Abeysuriya, S. Fernando, and R. Navarathna, "Beyond the Run-Rate: Forecasting Framework for First Innings Score in T20 Cricket," MERCon 2023, University of Moratuwa. [Link](#)
